FCC Part 15.247/Industry Canada RSS-210 Annex 8 Application Form

Product Name: Venice 6.5

FCC id/or Industry Canada ID: YYX-HA-FS2026-F5

Introduction

The following listed sections are requirements outlined by the FCC/Industry Canada which the equipment must meet in order to complete a successful application to the FCC/Industry Canada. If the equipment being submitted for testing is subject to the rules in 15.247 or RSS-210 Annex 8, the following sections must be completed. Sections 3 to 6 are taken from the FCC Guidance Document DA 00-705.

		210 Annex 8 , the following section from the FCC Guidance Docur		pleted.
Sectio	n 1			
	- Antenna requirement.			
a)	Integral Antenna	[X]		
b)	Dedicated Antenna	[]		
c)	Antenna Connector*	[] Antenna Connector Type		
	•	ase specify how this is connected		
	option C is identified plea lest photographs of both	ase specify the connector type, e connectors.	g. Reverse SMA	and provide
<u>Sectio</u>	<u>n 2</u>			
	Has the radio device be	en approved to 802.15.1?	Yes[]	No [X]
	(Bluetooth)			
If Yes,	then please provide evid	ence of such approval (e.g. Cert	ificate, Test Repo	ort etc) .
If Yes	you do not have to answe	er the questions in Sections 3 to 6	ò.	
If No, o		please answer the following que	stions in Sections	s 3 to 6 is
	information, Test Resu	vidence for the following sections Its obtained on the product, or Te e the Chip itself controls compliar	est Results obtain	using the
<u>Sectio</u>	n 3 Pseudorandor	n Frequency Hopping Sequenc	<u>:e</u>	
sequer	nce channels, in order	quence is generated. Provide to demonstrate that the seque equency hopping spread spectrules.	ence meets the	
Not ap	plicable.			

Section 4 Equal Hopping Frequency Use

in the hopping	n average (e.g., that each new transmission event begins on the next channel sequence after the final channel used in the previous transmission event).
Not applicable.	
Section 5	System Receiver Input Bandwidth
	the associated receiver(s) complies with the requirement that its input ner RF or IF) matches the bandwidth of the transmitted signal.
Not applicable.	
Section 6	System Receiver Honning Canability
Section 6 Describe how to with the transm	System Receiver Hopping Capability the associated receiver(s) has the ability to shift frequencies in synchronization nitted signals.
Describe how t	the associated receiver(s) has the ability to shift frequencies in synchronization nitted signals.
Describe how the with the transm	the associated receiver(s) has the ability to shift frequencies in synchronization nitted signals.
Describe how the with the transm	the associated receiver(s) has the ability to shift frequencies in synchronization nitted signals.
Describe how the with the transm	the associated receiver(s) has the ability to shift frequencies in synchronization nitted signals.
Describe how the with the transm	the associated receiver(s) has the ability to shift frequencies in synchronization nitted signals.
Describe how the with the transment of the work of the	the associated receiver(s) has the ability to shift frequencies in synchronization nitted signals.
Describe how the with the transmin Not applicable. Completed by	the associated receiver(s) has the ability to shift frequencies in synchronization nitted signals.

Describe how each individual EUT meets the requirement that each of its hopping channels is
